

ROAD ACCIDENTS IN NIGERIA

DATA ANALYSIS REPORT BY
OZOBIALU KOSISOCHUKWU ANTHONIA

PROJECT PLAN

INTRODUCTION

In Nigeria, injuries and deaths resulting from road accidents are on the rise and are Nigeria's third-leading cause of overall deaths, the leading cause of trauma-related deaths and the most common causes of disability, with substantial economic and social repercussions.

Every day, an estimate of 16 Nigerians lose their lives on the country's roads.

Today, we'll explore the alarming reality of Nigeria's road accidents and uncover solutions to save lives.

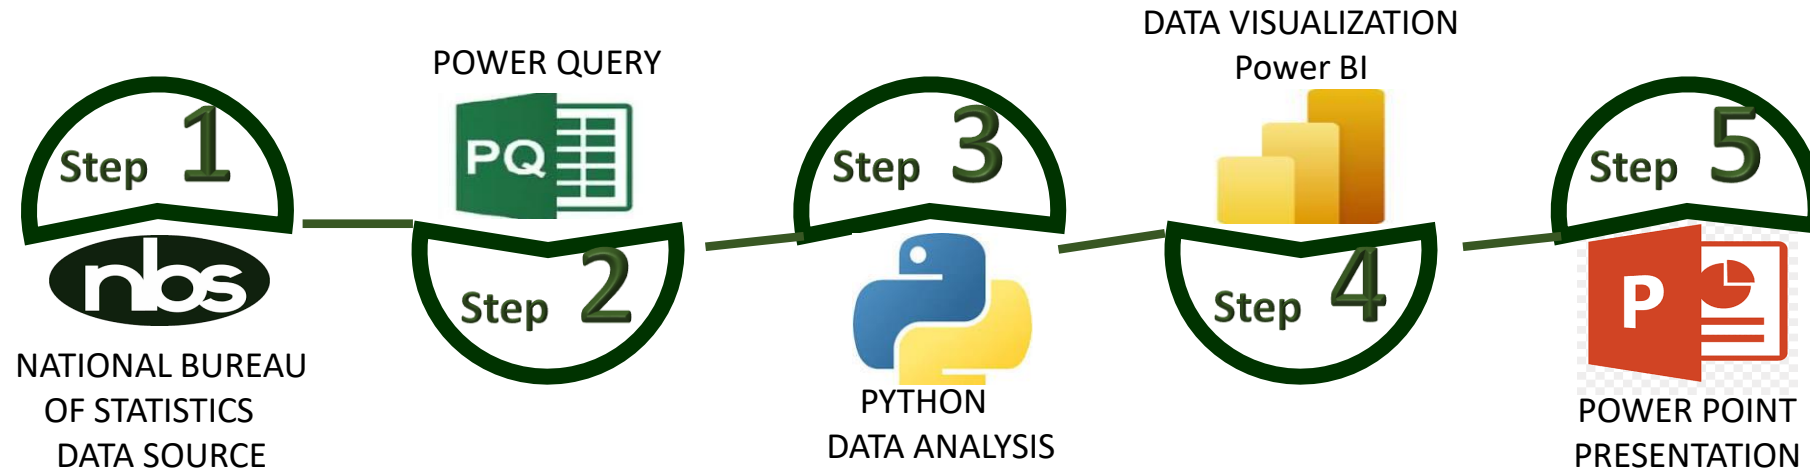

OVERVIEW

Dataset description: I collected the dataset on Nigeria road accidents to better understand the trends, causative factors, and impacts associated with these accidents across the country. The dataset includes detailed records of accidents, including the outcomes, states of those involved, the vehicles involved and the causes.

Why It Matters: Addressing the road accidents is crucial for several reasons:

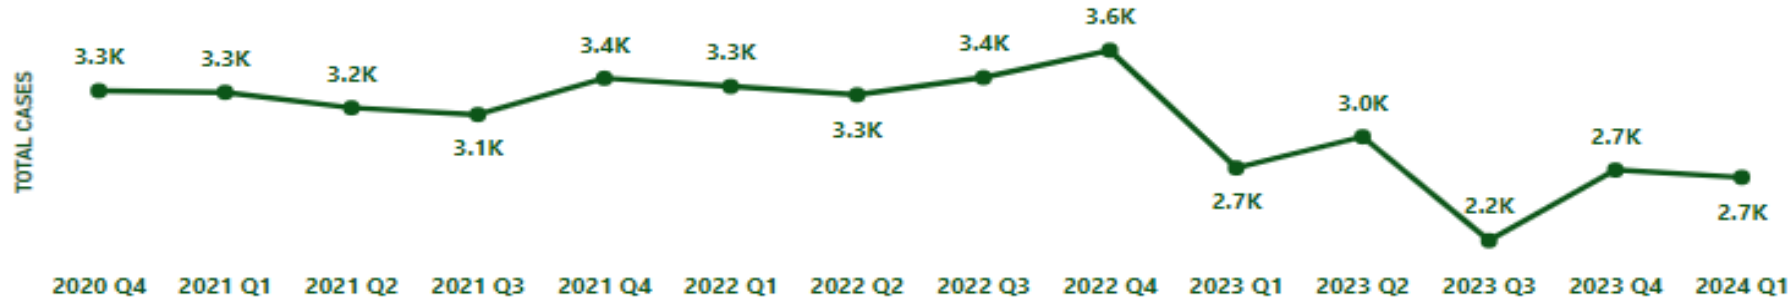

- **Save lives/alleviate suffering:** to prevent unnecessary fatalities, injuries, and long-term disabilities.
- **Economic Impact:** Road accidents impose significant costs on healthcare systems, insurance, and lost productivity. Addressing these issues can lead to economic savings for individuals and society
- **Public Confidence/Community trust:** A safer road environment boosts public confidence in transportation systems, encouraging more people to use roads for travel and commerce
- **Traffic Efficiency:** Lower accident rates contribute to smoother traffic flow, reducing congestion and travel times for all road users.

LEADING CAUSES OF ROAD ACCIDENT IN EACH STATE

SPV - 14

ZAMFARA

WOT - 2

CONCLUSION

- Cases, deaths and injuries occurred most in 2022 followed by 2021 and then 2023.
- FCT, Kaduna, Ogun, Nasarawa, Niger are the top 5 states with most cases and deaths in Nigeria.
- Serious cases occurred most in Nigeria followed by the fatal, then the minor cases for 2024 Q1.
- Male adults are mostly the people that suffers from road accident while the female children are the least.
- Speed violation is the major cause of road accident in Nigeria.

RECOMMENDATIONS

- A. Strengthen Traffic Regulations: FRSC should review and strengthen traffic regulations, focusing on stricter enforcement of speed limits and distracted driving laws to improve overall road safety.
- B. Regular Safety Audits: Conducting regular safety audits of high-traffic areas can help identify hazards and lead to targeted improvements in infrastructure and signage.
- C. Invest in Education Programs: Implementing educational programs in schools and communities about safe driving practices can instill lifelong habits that contribute to safer roads.
- D. Improve Road Infrastructure: Invest in upgrading road infrastructure, including better signage, improved lighting, and the maintenance of road surfaces to enhance safety and reduce accidents.
- E. Implement Targeted Safety Campaigns: Launch targeted public safety campaigns focusing on high-risk behaviors, such as speeding and distracted driving, to raise awareness and promote safer driving habits.

THANK
you
